KS2

Challenge

Now you have found all of the organs, see if you can label Skelly the Skeleton's organs. His heart cannot be labelled as it is covered by the lungs in this image.

Did you know...

you cannot label my heart as it is located between my lungs in the centre of my chest, slightly to the left of the breastbone (sternum). It is not directly behind the lungs, but rather between them in a position where some parts of the heart are covered - or rather surrounded by - the lungs
